AI/ML & Generative AI Enthusiast | Bengaluru, Karnataka, India

## Professional Summary

Computer Science undergraduate specializing in AI & ML with strong foundations in Java, Python, SQL, object-oriented programming, and software development. Hands-on experience developing backend applications and machine learning projects.

## Education

**Dayananda Sagar University**, Bengaluru, Karnataka
B.Tech in Computer Science (Specialization: Artificial Intelligence & Machine Learning) Aug 2022 – Oct 2026

## Technical Skills

**Programming:** Python, Java, C++, C, SQL
**Machine Learning:** Supervised Learning, Classification, Feature Engineering, SMOTE, Model Evaluation, Cross-Validation
**Generative AI:** Prompt Engineering, LLM Applications, RAG Pipelines, Embeddings, Vector Databases (FAISS, Chroma)
**Libraries & Frameworks:** Scikit-learn, Pandas, NumPy, Matplotlib, PyTorch (Beginner), LangChain (Learning), Streamlit
**Databases:** MySQL, MongoDB
**Tools & Technologies:** Git, GitHub, Jupyter Notebook, REST APIs, HTML, CSS, JavaScript, Node.js (Basic)

## Projects

**LLM-Based Document Q&A Chatbot (RAG Prototype) — Python, LangChain, FAISS, Streamlit** Feb 2026
- Built a Retrieval-Augmented Generation (RAG) system for intelligent document question answering with context-aware responses.
- Implemented embeddings and semantic similarity search using FAISS vector store for efficient document retrieval.
- Designed prompt templates and response pipeline using LangChain with integrated LLM for natural language generation.
- Deployed interactive Streamlit interface enabling real-time querying with version-controlled GitHub workflow.

**Credit Card Fraud Detection System — Python, Scikit-learn, SMOTE, Pandas** Jan 2025 – Feb 2025
- Developed end-to-end ML pipeline processing 280K+ credit card transactions to identify fraudulent patterns.
- Applied SMOTE technique to handle severe class imbalance, improving fraud recall by approximately 20%.
- Achieved F1-score of 0.92 with comprehensive evaluation using precision, recall, ROC-AUC, and confusion matrices.
- Created reproducible GitHub workflow with complete documentation and experiment tracking.

**Smart Logistics Management & Analytics Platform — Python, MySQL, Streamlit** July 2026
- Developed an end-to-end logistics analytics platform with 351K+ records using Python and MySQL.
- Designed a normalized relational database and optimized SQL queries for efficient data analysis.
- Built an interactive Streamlit dashboard for shipment tracking, cost analysis, and operational insights.

## Certifications

- Introduction to Data Science — Cisco Networking Academy
- Ethics of Artificial Intelligence — Coursera
- Linux for Beginners — Infosys Springboard

## Currently Learning

Generative AI application development · RAG pipelines and vector databases · LangChain and LLM workflows · Prompt engineering and evaluation techniques
