Summary

Computer Science undergraduate specializing in Artificial Intelligence & Machine Learning with strong foundations in Java, C++, C, SQL, object-oriented programming, and software development. Hands-on experience building software and data-driven applications, developing REST APIs, working with relational databases, and using Git/GitHub. Strong problem-solving and analytical skills with experience in debugging, data processing, and developing end-to-end projects.

Education

Dayananda Sagar University B-TECH

CSE-AIML Harohalli, Karnataka • 2022-2026

Experience

Soukhya Tech Pvt Ltd Bangalore, Karnataka

Intern-Full Stack Developer Feb 2026-Present

- Developed an ERP-based face recognition attendance management system.
- Worked with Java, Spring Boot, PostgreSQL, REST APIs, Git/GitHub, OpenCV and React.
- Developed backend APIs and integrated application components for employee registration and attendance tracking.
- Worked with database operations and API integration in a team-based development environment.

Skills

Java

Java, OOP, Object Oriented Programming

C++

Programming, C++, OOP

Python

Pandas, Numpy, Python

SQL

MySQL, SQLite, RDBMS, SQL

RestAPI

REST, API, JSON

Projects

Smart Logistics Management & Analytics Platform — Python, MySQL, Streamlit July 2026

- Developed an end-to-end logistics analytics platform with 351K+ records using Python and MySQL.
- Designed a normalized relational database and optimized SQL queries for efficient data analysis.
- Built an interactive Streamlit dashboard for shipment tracking, cost analysis, and operational insight

Traffic Violations Insight System — Python, Pandas, SQLite, Parquet, Streamlit August 2026

- Built an end-to-end data engineering and analytics pipeline for 2.07M+ traffic violation records.

- Developed chunked ETL preprocessing to clean, normalize, and feature-engineer large-scale traffic data.
- Optimized storage by converting an 880 MB raw CSV into 197 MB Parquet and an indexed SQLite relational database.
- Implemented automated EDA, SQL-based analysis, unit testing, and an interactive Streamlit dashboard with dynamic filters and visualizations

Credit Card Fraud Detection System — Python, Scikit-learn, SMOTE, Pandas Jan 2025-Feb 2025

- Developed end-to-end ML pipeline processing 280K+ credit card transactions to identify fraudulent patterns.
- Applied SMOTE technique to handle severe class imbalance, improving fraud recall by approximately 20%.
- Achieved F1-score of 0.92 with comprehensive evaluation using precision, recall, ROC-AUC, and confusion matrices.
- Created reproducible GitHub workflow with complete documentation and experiment tracking.

Certifications

Introduction to Data Science
Cisco Networking Academy

Ethics of Artificial Intelligence
Coursera

Linux for Beginners
Infosys Springboard
